

#Internship day week2-day 18-may 2020

#internship week 4 day 1

Today we have well arranged our git hub repository and i also learnt to use git hub by desktop app. Other than that i was having my university exam to day so read a lot about digital signal processing and for internship purpose i have designed and implemented body of remote for that i have simply used the box of li-po battery and after placing wooden structure in it i have placed a joy stick and x-bee. And also checked various component that i have received. Though the circuit connection and remote X - bee configuration is still remaining.
